

Action Report of the 60" MVU™ AUDI Company

"Because of a smoldering fire in a ventilation shaft below the production hall A2 there was a heavy smoke production in the ground floor of the production hall. Through fast, purposeful fire fighting, and because of PPV created by the MVU-60, smoke could be directed to the outside atmosphere. Within a short time there was no smoke in the production hall, therefore production stoppage and the risk to personnel was prevented."
